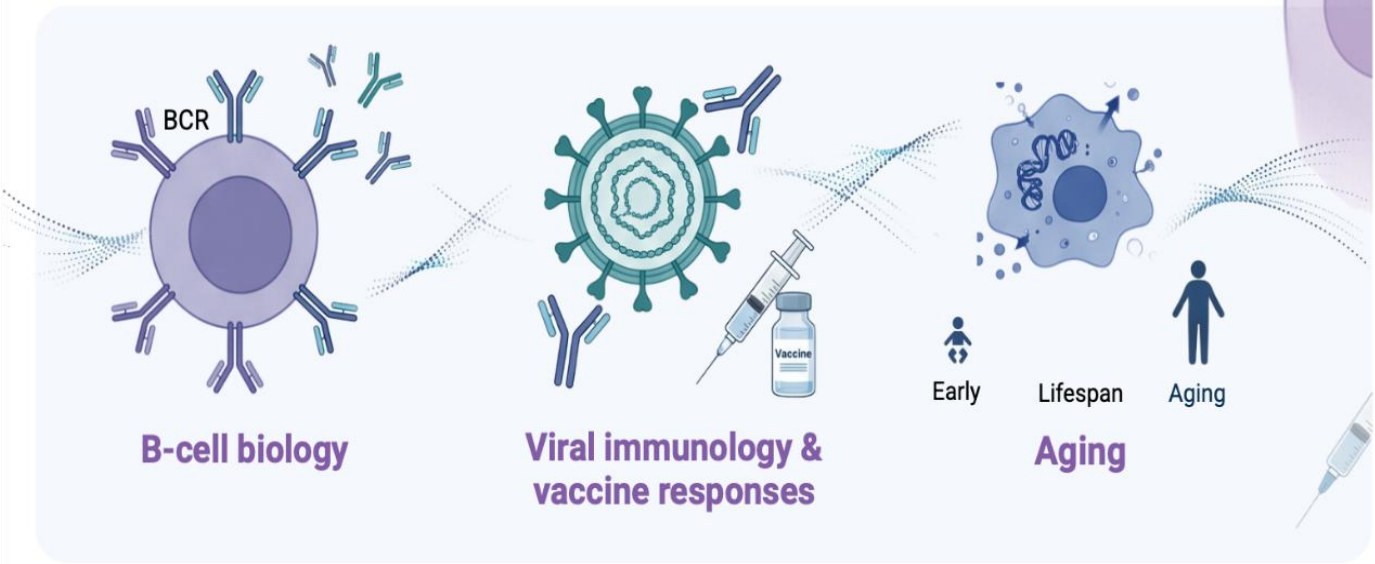
POSTDOCTORAL RESEARCHER

Infectious Diseases, B-Cell Biology, Aging

LUCAS LAB | YALE UNIVERSITY

The Lucas Lab at Yale University is looking for a postdoctoral researcher to join our team. We study B-cell biology and immune responses to viral infections, with a particular interest in how these processes change with age. Our goal is to understand the cellular and molecular mechanisms that shape protective immunity across the lifespan.



B-cell biology

Viral immunology & vaccine responses

Aging

CANDIDATE PROFILE

We're looking for someone with a foundation in immunology and molecular biology, scientific curiosity, and enthusiasm for collaborative research. Experience in B-cell biology, viral infections, or aging is valued, but expertise in all three is not required.

POSITION DESCRIPTION

The position offers room to develop new ideas, build an independent scientific profile, and contribute to an open and supportive laboratory culture.

ELIGIBILITY

Applicants should have, or be close to completing, a PhD, MD, or equivalent degree in immunology, molecular biology, microbiology cell biology, or a related field.

INTERESTED?

Send a brief description of your research experience and interests, your CV, and contact information for 3 references to:
carolina.lucas@yale.edu

We welcome scientists with diverse backgrounds, experiences, and perspectives.
