

Postdoctoral Fellow in Microbiology & Immunology
University of Pennsylvania, Perelman School of Medicine

Title: Postdoctoral Fellow

Location: Philadelphia, PA, USA, 19104

A postdoctoral position is available to study disease pathogenesis of emerging viral pathogens using in vitro and in vivo models in Kellie Ann Jurado's laboratory at Perelman School of Medicine at the University of Pennsylvania. Work in our newly established laboratory aims to investigate (1) mechanisms of pathogenesis and (2) the immune response associated with viral infection of relevant, emerging and re-emerging viral pathogens. We are particularly interested in viral agents that target the nervous system. Candidates should have previous immunology or microbiology focused research experiences. Dr. Jurado would be delighted to serve as the host principal investigator for prospective candidates in order to facilitate the acquisition of postdoctoral funding.

Interested candidates should send a CV, statement of research interests and contact information of three references to: kellie.jurado@penmedicine.upenn.edu.
