

Postdoc/Research Scientist I – Immunology

Postdoc/Research Scientist positions are available in the laboratory of Dr. Dorina Avram in the Department of Immunology at the Moffit Cancer Center for the following projects:

(1) Transcriptional and epigenetic control of T and innate lymphoid cell programs in tumors, autoimmunity and in responses to infections.

(2) Ubiquitination in control of inflammation and cancer at mucosal sites and in tissues.

We use genetically engineered mouse models, organoid culture systems and patient-derived samples, along with “omics” approaches with the ultimate goal to harness the immune responses for cancer therapies and autoimmunity.

Credentials and Qualifications: We seek an enthusiastic candidate with a Ph.D. in immunology or cancer biology and strong commitment, with rich laboratory experience, including expertise with mice. Submit your curriculum vitae, including clear list of publications and a cover letter directly to dorina.avram@moffitt.org.
